## **BLM Pipeline Expert Enhances Team**

ALBUQUERQUE – The Albuquerque Field Office of the Bureau of Land Management (BLM) announces that they will augment their staff, charged with writing an Environmental Impact Statement (EIS) for the New Mexico Products Pipeline project, with a new member—Don Keyes, Chief Engineer with the Anchorage Joint Pipeline Office.

According to Steve Anderson, Assistant Field Manager for the BLM Albuquerque District, “He’s just what we need to round out our talented pool of experts.

Keyes, a BLM employee in Alaska, brings over 20 years of experience with him.

The engineer is scheduled to visit the Albuquerque Field Office March 20, 21, and 22. He will meet with interdisciplinary team members, tour local areas affected by the proposed project, and review myriad aspects of the New Mexico Products Pipeline project.

“Keyes will bring a wealth of experience to this interdisciplinary team,” said Anderson, “and that will certainly give us a better product in the end.”
